

## FOR IMMEDIATE RELEASE:

### **Magellan's Law releases *qd documents*<sup>TM</sup> version 2.1.1**

*San Antonio, TX - February 24, 2010* - Magellan's Law Corporation has announced **qd documents<sup>TM</sup>** Professional Discovery Edition version 2.1.1. The qd documents software is a tool for handling litigation discovery materials, including coded databases, text, images, transcripts and electronic documents.

This maintenance release adds a major new feature, the Produce Documents Tool, and greatly speeds up searches on the full text of document records. It also enhances many existing features and fixes a handful of bugs.

This is a free upgrade for registered 2.0 and 2.1 users.

Here's more detail:

- Adds a new Produce Documents Tool. This tool will assemble a set of document images for production, copying them from the user's image library into a newly created directory. Optionally, the tool can also:
  - renumber the documents to be produced (when this option is selected, the image files are renamed with the new number, the new numbers are added to the database record for the document, and the new number becomes available for labeling the images during printing or display)
  - create a comma-delimited cross-reference file that is usable by other litigation support applications (including the qd documents software) to connect the images to database records
  - create a comma-delimited data file that includes certain basic, objective document fields that can be used by other litigation support applications (including the qd documents software) to create database records
- Enhancement to the internal binding of full text data to document records to greatly speed up full text searches
- Adds automatic reassignment of vocabularies when the field definition is changed to modify the field's tag
- Enhancement that permits quick searches and advanced searches to be initiated by pressing the Enter or Return key while the cursor is in one of the search fields. Previously it was necessary to click a search button to initiate a search
- Enhancement that permits user to "scrub" full text data during import to remove possibly damaging or disruptive characters
- Enhancement to keyboard navigation to permit paging up and down in the document list using keyboard shortcuts

- Enhancement to image printing that provides significantly faster collection of large image sets for printing and provides optional error sheet printing for documents in the print set that don't have images
- Enhancement to image viewer that permits browsing of images across document boundaries without the need to explicitly request the next document
- Enhancement to image cross-reference import to convert operating system native path formats to qd path formats
- Enhancement to image cross-reference import to allow imported data to set image rotation. Added buttons to cross-reference display to permit batch-setting of image compatibility flags
- Enhancement to image docno-labeling to permit Admin users to define and save docno label formats and defaults for each database as part of Image Setup
- Enhancement to attachment functionality to permit saving of "versions" of an attachment
- Changes to database creation default settings to simplify database creation option selection
- Change to user preference defaults to include full text in "all fields" searches by default
- Minor display changes to About page and Setup > Text pages
- Minor display changes to report printing layouts and print setup, aimed at supporting more user printers
- Fixes a bug that prevented "time" data from being imported from delimited files
- Fixes a bug that caused single text pages to be broken into multiple pages during import
- Fixes a bug that prevented direct conversion of private books into witness books
- Fixes a bug that caused "single" database archives to be described as "multiple" database archives in the restore process report
- Fixes a bug that caused loss of some custom report format specifications under certain conditions during archive restore
- Fixes a bug that caused the "Standard" image viewer to sometimes be identified as a "Custom" viewer

**qd documents** Professional Discovery Edition is available now from Magellan's Law Corporation.
